#### **NOTES**

Gravel pavers should be overfilled by approximately 10-20 mm (1-2 cm) above the top of the grid cells.

#### Why Overfill?

- ▶ To hide the grid: A slight overfill conceals the plastic structure of the paver, making the surface visually continuous with the surrounding area.
- ► To allow for settling and compaction: Gravel will settle over time due to foot or vehicle traffic. The overfill compensates for this, maintaining coverage and performance.
- ► To maintain a smooth surface: Without enough overfill, the tops of the grid can become exposed, especially in high-traffic areas, which may lead to discomfort, wear, or damage.

This is the small panel variant of CellTrack, with panels available in 500mm x 500mm sections and depth options of either 38mm or 50mm. A large panel variant is available.

### **PACKAGING:**

Quantity per pallet	m <sup>2</sup> per pallet	Quantity per fill truck load	m <sup>2</sup> per full truck load	Dimensions of pallet
200	50m <sup>2</sup>	4,800 (24 pallets)	1,200m <sup>2</sup>	110cm x 110cm x 235cm (one-way pallet)
